1. Wagh Shivam Vijay
2. Shaikh Moinuddin Shakil Ahamed
3. Shaikh Farhan Faruk
4. Raundal Shubham Waman

2. Tech Stack Used

1. **Front End:** HTML, CSS, Bootstrap, Javascript.
2. **Back End:** PHP, MYSQL, Apache.
3. **IDE:** VsCoode, Sublime.

3. Problem Definition

In recent times, food wastage is increasing at an unprecedented rate and creating a negative effect on the economic growth factors. This in turn creates a major impact on the agricultural processing industries. As food recycling is always remaining a complex task, in this project, we are focusing mainly on the food wastage in the office premises, weddings, events etc. This web application is used to manage the wastage of foods in a useful way. Every day the people are

wasting lots of food. So we have to reduce the food wastage problem online. In general, we are automating the process of food wastage.

Project Title

EMPLOYEE LEAVE MANAGEMENT SYSTEM

Group members

1) NIKITA JAGTAP
2) KETAN NIKAM
3) KUNAL PAGAR

Front End : Html , Css
Backend : PHP , Sql
Scripting : java script

Problem Defination

The "Employee Leave Management System" has been developed to override the problems prevailing in the practicing manual system. This software is supported to eliminate and, in some cases, reduce the hardships faced by this existing system. Moreover, this system is designed for the particular need of the company to carry out operations in a smooth and effective manner.

The application is reduced as much as possible to avoid errors while entering the data. It also provides error message while entering invalid data. No formal knowledge is needed for the user to use this system. Thus, by this all it proves it is user-friendly. Employee Leave Management System, as described above, can lead to error free, secure, reliable and fast management system. It can assist the user to concentrate on their other activities rather to concentrate on the record keeping. Thus, it will help organization in better utilization of resources.

Every organization, whether big or small, has challenges to overcome and managing the information of Leave, Employee, Payroll, Leave Type, Salary. Every Employee Leave Management System has different Employee needs; therefore, we design exclusive employee management systems that are adapted to your managerial requirements. This is designed to assist in strategic planning, and will help you ensure that your organization is equipped with the right level of information and details for your future goals. Also, for those busy executives who are always on the go, our systems come with remote access features, which will allow you to manage

Project Title : Campus Recruitment

Team Members : a) Pratiksha Patil

b) Mrunal Patil

c) Pranjal Bhalerao

d) Rushikesh Pawar

Front End : HTML , CSS, JSP

Back End : Python , Djanso

Problem Defination:

Campus Recruitment was developed for creating an interactive job vacancy form for candidates. This web application manage updates both

SYNOPSIS

1) Project Title :- "Hand Written Digit Recognition using Machine Learning"

2) Team Members :- 1) Pramod Giri

2) Satyam Tibole

3) Gaurav Nirmal

3) Required Langauage Skill :- HTML,CSS,JAVA SCRIPT,PYTHON

4) Operating Platform :- Windows 2000/NT/XP6.

5) Problem Defination :-

Recognition is identifying or distinguishing a thing or an individual from the past experiences or learning. Similarly,Digit Recognition is nothing but recognizing or identifying the digits in any document. Digit recognition framework is simply the working of a machine to prepare itself or interpret the digits

The general problem we predicted we would face in this digit classification problem was the similarity between the digits like 1 and 7, 5 and 6, 3 and 8, 9 and 8 etc. Also people write the same digit in many different ways–the digit ' 1 ' is written as ' 1 ', ' 1 ', or ' 1 '. Similarly 7 may be written as ' 7 ', ' 7 ', or ' 7 '.

Our goal was to implement a pattern classification method to recognize the handwritten digits provided in the MNIST data set of images of hand written digits (0-9).

6) Existing System & Need for the New System :-

In a paper published by Saeed AL-Mansoori, Multilayer Perceptron (MLP) Neural Network was implemented to recognize and predict handwritten digits from 0 to 9.The proposed neural system was trained and tested on a dataset achieved from MNIST. A. Existing System These days, an ever-increasing number of individuals

3. Front End: HTML & CSS

4. Back End: PHP

5. Problem Definition:

Coaching Management System is very helpful to the users. The aim of this project is to provide quick, immediate access to the course. It can provide special advantages to the administration, faculties and students down the road. Login module helps the user to login to the site from anywhere. For that he/she must type the username and password correctly.

Objectives: General objective of our project is to change the current manual coaching Management System to computerized

Project Topic: **Rent My Stuff**

A] Project Description/Definition: Now a days we have a lot of products that cost a lot but are not used so much by ourselves. These products cost a lot and are hard to buy for using just a few times, we are trying to create an e-commerce portal that will allow the users to upload a product that they would like to be leashed to someone else for a few hours or so. We see a lot of website that allow us to buy or sell stuff online like OLX, Quikr etc. but they don't allow leashing the product to someone. Not everyone can afford to buy something to use just once, so this website would be a lot of help for those people. The website would accept all the information necessary of the person who is leashing the product like their address proof, google location etc. The user would have to login so he could add multiple products at once, which also includes the information of the person who is adding the product. The safety of the product would be considered with the person who would be taking the project by allowing him to pay rent money to the person leasing the product. This website would allow any one to upload any product that he would like others to use and also increase public interaction. The database of this project would be in php and will save the product, user and their information of person who is taking the product.

B] Present Theories/Literature Survey: In recent years, the leasing of cars, housing, computers, home appliances, clothing, and flower baskets has become an increasingly popular model. Characterized by a combination of funding and asset finance, modern leasing first emerged in the United States in the 1950s. Leasing is an economic activity that rents the right to use without changing the ownership of the property. In other words, the property owner (lessor) lets the property for the user (lessee) to use in accordance with a contract. The lessee pays a certain rent to the lessor according to a schedule. The lessor retains property ownership, and the lessee only exercises the right

5) Problem definition:

Every university college things of providing the best education to their students and the best is define by the most preferred and running technologies in market. The demand for every technology is not the same . every student will have his own preferred software language for development . To help every college understand the need of the most preferred

Technology by students ,my project "Online Voting System" comes into picture.

"Online voting system" is simple web – based online voting system that will help our college to know students most preferred language for development .

3. **IDE:** VsCoode, Sublime.

3. Problem Definition

In recent times, food wastage is increasing at an unprecedented rate and creating a negative effect on the economic growth factors. This in turn creates a major impact on the agricultural processing industries. As food recycling is always remaining a complex task, in this project, we are focusing mainly on the food wastage in the office premises, weddings, events etc. This web application is used to manage the wastage of foods in a useful way. Every day the people are

wasting lots of food. So we have to reduce the food wastage problem online. In general, we are automating the process of food wastage.
